# Targeted Therapies in Cancer Care

## Share your experiences

Researchers at the University of Sydney want to hear about your experiences of targeted therapies (sometimes known as precision therapies, immunotherapies, and molecular therapies) in cancer care.

We are interested in speaking to those over the age of 18 that have been screened for, received or are receiving targeted therapies for their cancer.

If you are interested in taking part, we would like to interview you for about an hour about your experiences, care, treatment and support.

To see how your experiences might change over time, we may ask to interview you again in the next 6-12 months.
